

Review By Team 1 Lack Creativity So... (Me Too) - T. Fabiha, Nadine Jackson, Isaac J.

Code By Team Square

Comments: 0

- Your QQKachoo.java only has one comment and that comment acknowledges an (easily resolvable) error.

~~Code~~ README.md: 3

- Capitalize Arraylist
- How do DLLNodes have more "depth"? Elaborate!
- + Clear headings
- 3 and 3.5 could be separate steps for clarity
- Where are the methods in order of implementation?

*sorry

Style 2.5

- disorganized → no ^{comments} ~~headings~~ separating the sections (in order of implementation or by type of method)
- ~~could place~~
- constructor does nothing, everything is initialized.
- + all add() methods are together
- + all remove() methods are together
- + effective whitespace
- non-specific var names

Robustness 2

- no exceptions - what if you try to add something that's not a ^{Card} card?
- toString() doesn't ^{return} ~~print~~ last element (only one test case and it doesn't work)
